

LISTING OF THE CLAIMS

1. (Previously presented) An apparatus for use in RF shielding, comprising:

a holder comprising RF shielding and configured for adjoining a magnet comprising magnet-RF-shielding, such that when the holder is adjoined to the magnet, the RF shielding of the holder and the magnet-RF-shielding form a substantially complete RF shield.
2. (Original) The apparatus of claim 1, further comprising a patient support unit configured to support a patient inside the RF shield.
3. (Previously presented) The apparatus of claim 1, wherein the holder comprises a support for supporting the patient support unit.
4. (Previously presented) The apparatus of claim 3, wherein the holder is attachable to the magnet.
5. (Previously presented) The apparatus of claim 2, wherein the holder is attachable to the patient support unit.
6. (Previously presented) The apparatus of claim 2, wherein the holder comprises apertures.
